

CS 354: Programming Languages

Instructor

Instructor: Jim Buffenbarger
Office: CCP-258
Voicemail: (208) 426-3567
Email: <mailto://buff@cs.boisestate.edu>
WWW: <http://csweb.boisestate.edu/~buff>

Meetings

Lectures: TuTh 1:30–2:45 CCP-243
Office hours: TuTh 2:45–3:45 CCP-258
by appointment CCP-258

Lectures will be audio/video recorded, and made available, afterwards.

I am happy to answer questions by email. Please please click [here](#), or see:

[pub/doc/EmailQuestions.pdf](#)

Catalog Description

Principles of programming languages: design, syntax, semantics, information binding, strings, arithmetic, input/output, recursion and extensibility.

PREREQ: CS 321.

Goals

At the end of the course, students will be able to do the following:

- identify characteristics of procedural, object-oriented, functional, and scripting languages
- describe the phases of program translation

- explain different forms of binding, visibility, scoping, and lifetime management
- demonstrate the differences between various parameter-passing methods
- explain the concepts of encapsulation, abstraction, inheritance, and polymorphism
- write programs in languages based on several different programming paradigms
- evaluate a language on the basis of the various features which it supports

Students also experience working on a team, developing a website, and giving an oral presentation.

This semester, new content has been added, as part of the *Semiconductors for All* initiative. New lectures, and a new homework assignment, have been incorporated, for the Verilog programming language. Verilog is a hardware-description language, for synthesizing semiconductor logic. More information is at the end of this syllabus.

Textbook

Programming Language Pragmatics, by Michael L. Scott, Fourth edition, 2015, Elsevier: Morgan Kaufmann.

Other Course Material

This syllabus, lecture slides, assignments, and other material is available in what we'll called our “pub” directory. It is available in three places: GitHub, Canvas, and the **onyx** cluster of computers. This directory is read-only. So, you might want to copy it, perhaps to your local computer.

The GitHub pub directory can be accessed at [GitHub](#), as shown in:

[pub/GitHub](#)

The Canvas pub directory can be accessed from our [Canvas](#) website, via the “Files” tab on the left sidebar.

The **onyx** pub directory can be accessed directly, by computers in our Computer Science Lab (CCP-240, CCP-241, and CCP-242).

Since `onyx.boisestate.edu` services Secure Shell (SSH) requests, you can also use SSH clients (e.g., `scp` and `sftp`) to access this `pub` directory remotely. However, beware: It contains symbolic links to parent directories, and `scp -r` will unconditionally follow them, thereby looping forever. To avoid this, use `sftp` or `tar/scp`, as needed.

In any case, the `onyx pub` directory is at:

```
~jbuffenb/classes/354/pub
```

The `onyx` cluster also has the advantage of containing all of the translators we will use.

Grades

At the end of the semester, the Registrar requires a letter grade for each student. Accordingly, during the semester, homework and exams are evaluated, and numeric scores are assigned. Each such artifact is worth a certain number of points, and has a weight. From these scores, a student's overall numeric/raw percentage is computed.

Collectively, a class's raw percentages form a distribution, with a mean and standard deviation, sometimes called a Bell Curve. An algorithm normalizes these values into a "grading" distribution, with a desired mean and standard deviation of 85 and 10 (i.e., the values are "curved"). A normalized value is then mapped to a letter grade, in the conventional way. If you are interested in the gory details, click [here](#).

During the semester all of this evolving data can be found in our `pub` directory, on `onyx`, its nodes, Canvas, and GitHub.

Homework is due at 11:59PM, Mountain Time, on the day it is due. Late work is not accepted. To submit your solution to an assignment, login to a lab computer, change to the directory containing the files you want to submit, and execute:

```
submit jbuffenb class assignment
```

For example:

```
submit jbuffenb cs354 hw1
```

The `submit` program has a nice `man` page.

When you submit a program, include: the source code, sample input data, and its corresponding results.

Scores are posted in our `pub/scores` directory, as they become available. You will receive a code, by email, indicating your row in the score sheet. You are encouraged to check your scores to ensure they are recorded properly. If you feel that a grading mistake has been made, contact me as soon as possible.

The weights of homework and exams is shown in the table below:

<i>Activity</i>	<i>Weight</i>
Book Assignments	10%
Language Assignments	30%
Translator Assignment	20%
Language Website	20%
Exam	10%
Final	10%

Book Assignments (BA)

Students are assigned several problem sets, from exercises at the end of each chapter of the textbook. Students work on these assignments individually, not as teams.

The rubric that will be used to grade each BA is distributed with the assignment.

Language Assignments (LA)

Students are assigned several programs, to be developed in what are expected to be un-familiar programming languages (e.g., Scheme). Translators for these languages are available on the Linux computers in the Computer Science lab. Students work on these individually, not as teams.

The rubric that will be used to grade each LA is distributed with the assignment. Try to focus on the assignments, rather than the rubrics.

Translator Assignment (TA)

Students extend a Java implementation of a simple programming-language translator (i.e., a combination interpreter/compiler). A Java development environment is available on the Linux computers in the Computer Science lab.

Students work on this assignment individually, not as teams.

The rubric that will be used to grade this assignment is distributed with the assignment.

Language Website (LW)

Students are randomly partitioned into teams, of 3–5 members. Each team chooses an unfamiliar programming language, and develops a website dedicated to that language. Website content includes example programs of varying complexity. During the last couple of weeks of the semester’s lectures, each team introduces their language, and describes the experience of programming in that language, in an in-person team-delivered oral presentation.

Of course, team members work together on this assignment.

The rubric that will be used to grade this assignment is distributed with the assignment, but scores will not be made available before the end of the semester.

Exams

An exam and a final are administered. These are in-class, open-note, open-textbook, and open-laptop tests. Students work on these individually.

Attendance

In-person lecture attendance is an important part of course participation. Attendance is taken at each lecture: starting five minutes before the scheduled start time, and ending fifteen minutes after the scheduled start time. Attendance is not taken during the first week of classes, holidays, or finals week.

Attendance can affect your grade. Each absence results in a one-percent reduction of your overall normalized percentage. Since a few absences are expected, completion of BSU’s on-line end-of-semester course evaluation will erase up to five absences.

Attendance is administered wirelessly, via the iClicker app, available for free, from your smartphone’s app store. For more information, click [here](#).

Source-Code Documentation

Good documentation and programming style is very important. Your programs must demonstrate these qualities for full credit. Good documentation and programming style includes:

- heading comments giving: author, date, class, and description
- function/procedure comments giving description of: purpose, parameters, and return value
- other comments where clarification of source code is needed
- proper and consistent indentation
- proper structure and modularity

For more information, and examples, click [here](#).

Academic Integrity

The University's goal is to foster an intellectual atmosphere that produces educated, literate people. Because cheating and plagiarism are at odds with that goal, those actions shall not be tolerated in any form. Academic dishonesty includes assisting a student to cheat, plagiarize, or commit any act of academic dishonesty. Plagiarism occurs when a person tries to represent another person's work as his or her own or borrows directly from another person's work without proper documentation.

If a student engages in academic dishonesty, the student may be dismissed from the class and may receive a failing grade. Other penalties may include suspension or expulsion from the University.

For much more information about academic integrity, including examples of academic dishonesty, please click [here](#). If you are unsure about a particular behavior, ask your instructor.

Labs and Safety

Each student receives an account on the cluster of computers in the Computer Science Labs: CCP-240, CCP-241, and CCP-242. The cluster comprises a server named `onyx.boisestate.edu` and a set of nodes with shared home directories. It is remotely accessible, via SSH. The cluster runs the Linux operating system.

Physical access requires building and room access. After-hours building access, and all-hours room access, require an authenticated proximity-type student-identification card.

You are responsible for understanding and obeying lab [rules](#).

Semiconductors for All

Our second homework assignment is about a programming language named Verilog. Verilog is a hardware-description language, for synthesizing semiconductor logic. The development of the assignment, its solution, and the accompanying lecture material, was funded as part of a \$5M grant to BSU, named *Semiconductors for All*. The grantor was the *Idaho Workforce Development Council*, the *Idaho Department of Labor*, and, ultimately, President Biden's \$280B *CHIPS and Science Act*, of 2022.

The grant requires our syllabus include the following content. Please read it.

Our goal is to provide you with a high-demand set of skills and education that enhance your current job and prepare you for future jobs. This program was funded through a generous grant from Idaho Workforce Development Council, which helped make curriculum changes to this course possible. As part of the grant requirements, we need to get your permission to share critical information about your participation in this program. The Idaho Workforce Development Council will use this information to track their return on investment in this program.

With your permission, we will be using an established and secure process to transfer specific information to the Idaho Department of Labor. This process has been approved by the Chief Information Security Office of Boise State University. Specifically, we will generate a list of student ID numbers with names that will be sent to the Boise State University Office for Institutional Effectiveness. They will then run a report with names and Social Security Numbers. The Office of Institutional Effectiveness will send this information to the Department of Labor's Idaho Workforce Development Council using the established secure channel.

Nobody but the Idaho Department of Labor (including us) will see your personal information. Your personal information will not be sold or used for anything but the purposes outlined here.

In order for you to access the content of the first part of this module, you will need to complete a brief, one-question "quiz" stating whether or not you choose to participate in the program sharing the

information described above with the Boise State Office of Institutional Effectiveness and the Idaho Department of Labor. Regardless if you choose to participate or not, once you complete the quiz, the first part of this module's content will be available to you. Thank you for considering this request to ensure ongoing funding for this program. We wish you the best in this course!

DRAFT

Schedule

<i>Week</i>	<i>Date</i>	<i>Topic</i>	<i>Assigned</i>	<i>Due</i>	<i>Reading</i>
1	Aug 20 Tue	Introduction			1
	Aug 22 Thu		LA1		
2	Aug 27 Tue	Programming Language Syntax			2.0-2.1
	Aug 29 Thu				
3	Sep 03 Tue			LA1	
	Sep 05 Thu				
4	Sep 10 Tue	Names, Scopes, and Bindings	LA2,BA1		3
	Sep 12 Thu				
5	Sep 17 Tue				
	Sep 19 Thu				
6	Sep 24 Tue			LA2,BA1	
	Sep 26 Thu		TA1		4.0-4.1
7	Oct 01 Tue				
	Oct 03 Thu	Control Flow			6
8	Oct 08 Tue		LA3		
	Oct 10 Thu	Exam		TA1	
9	Oct 15 Tue		TA2		
	Oct 17 Thu	Data Types			7-8
10	Oct 22 Tue				
	Oct 24 Thu		LW		
11	Oct 29 Tue	Subroutines and Control Abstractions			9.0-9.4
	Oct 31 Thu			LA3	
12	Nov 05 Tue		LA4	TA2	
	Nov 07 Thu
